Pablo Muracao - Dashboard Portfolio

This document shows three dashboards built for real business use. Each one focuses on a different problem: marketing performance, HR analytics, and postpaid pricing.

Marketing Performance Dashboard

This dashboard tracks campaign performance across platforms like Meta, TikTok, and DV360. The goal is to understand what is driving leads and how much they cost.

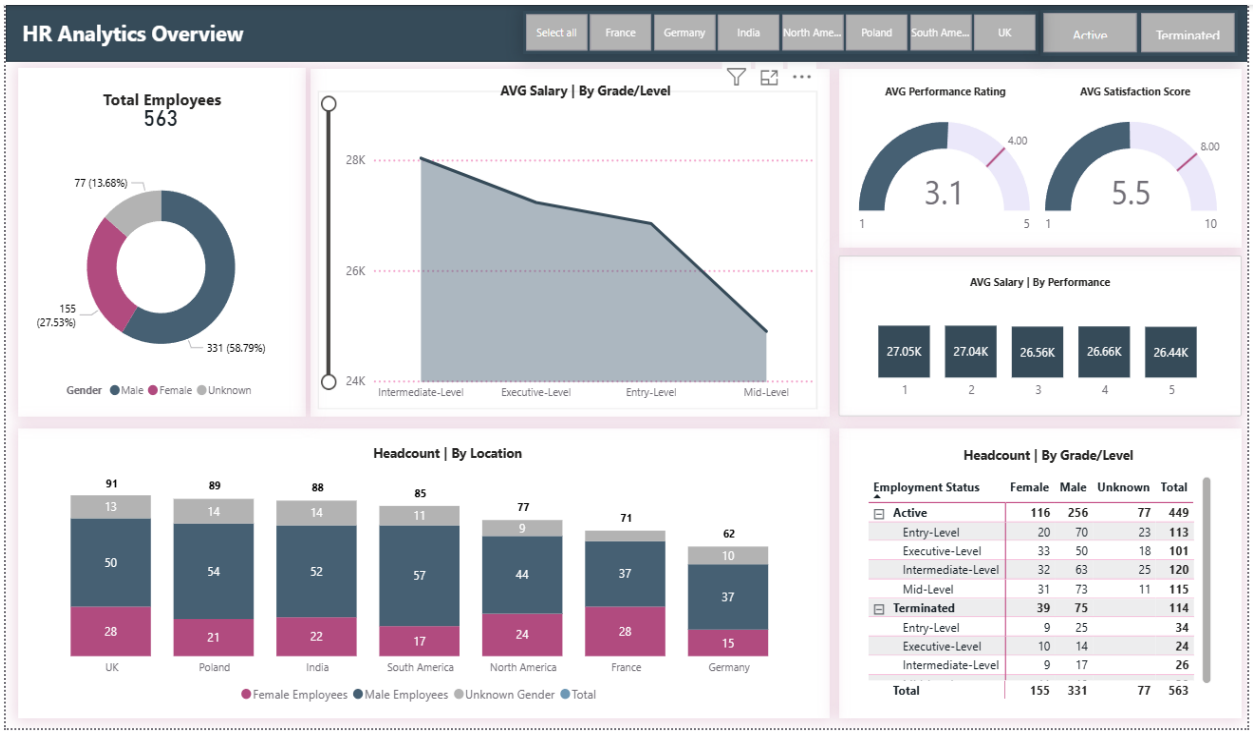
Main metrics include conversions, cost per acquisition, cost per click, and click-through rate.

It helps compare campaigns and platforms to decide where to invest budget.

Example insight: Meta drives most of the leads, while TikTok contributes a strong share at a lower volume. DV360 generates very few leads, which suggests budget should be reviewed.

HR Analytics Dashboard

This dashboard provides a clear view of workforce data across locations and roles.



It tracks headcount, salary distribution, performance, and satisfaction.

The goal is to give quick visibility into workforce structure and trends.

Example insight: headcount is concentrated in a few regions, while performance and satisfaction vary across teams, which can highlight areas that need attention.

Postpaid Pricing and Benchmark Dashboard

This dashboard compares postpaid plan pricing across brands and contract terms.

It shows retail prices, contract pricing, and discount levels across 12, 18, and 24 month terms.

It allows filtering by plan, week, brand, and model to explore pricing strategies.

Example insight: some brands apply very aggressive discounts across all terms, while others maintain more stable pricing. This helps understand competitive positioning.

These dashboards are built to support decisions, not just reporting. The focus is on clarity, usability, and real business impact.
